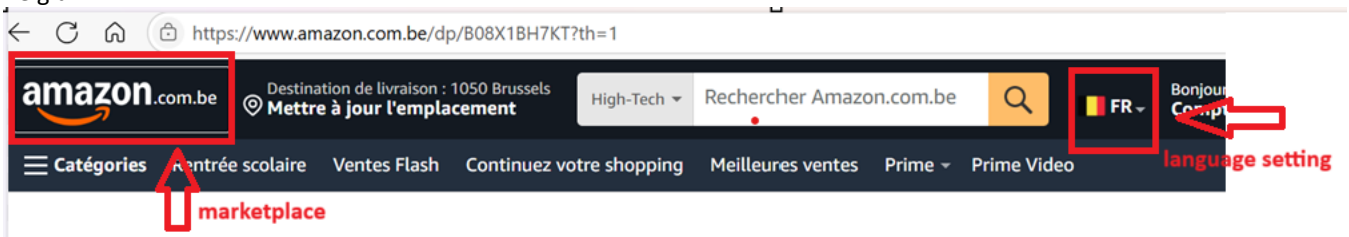
LIONBRIDGE

Search Relevance ESCI– Annotation Instructions

Your task is to evaluate **search queries** (used by customers to search for products on an e-commerce platform) against the offered product (OP) found at the product detail page and identify the **relevance match** for the search query-offered product pair.

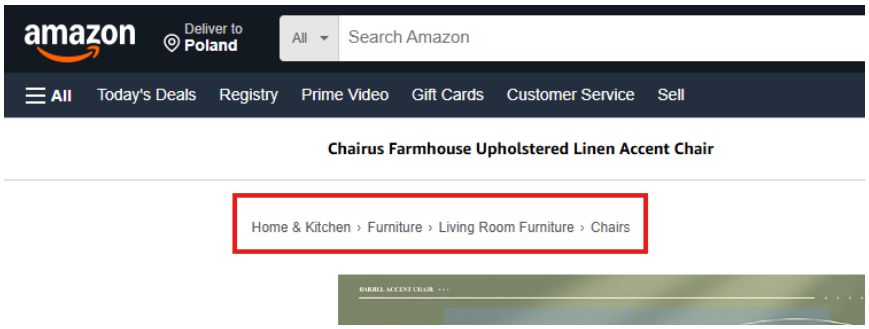
Before you get started

- ✓ Make sure you read and understand the Task Instructions and the Review Scope.
- ✓ Review the Relevance Match Types to understand their key differences.
- ✓ Familiarise yourself with the Terminology.
- ✓ Go through all the listed Rules of Thumb and make sure the labelling rationale is clear
- ✓ Using google search, navigate to the Amazon site relevant to the locale/marketplace you are reviewing (i.e Belgium > https://www.amazon.com.be/ and set the language to the target language you are reviewing (.ie. French for Belgium



Terminology

- **SQ (Search Query)** - The keywords or phrase related to the product the customer is looking for.
- **DP (Desired product)** - The likely or intended product the customer is looking for with the search query.
- **OP (Offered product)** - The product offered to the customer based on their search query.
- **Product type** - refers to a class of products that serve a similar function or fulfil the same need.
- **Product attributes** - is a specific characteristic or feature of a product that defines or describes it. Attributes help distinguish one product from another within the same product type, i.e.: purpose, brand, model, compatibility, age, gender, colour, size, genre, occasion/theme, style, material.
- **Bundled product** - Multiple products that are packaged together and sold as a single unit. Products commonly used together but that can be either sold separately or together, i.e.: *smartphone + protective case*; *Electric Guitar + amplifier + stand + cover*; *printer and scanner*, etc.
  → Bundled product can include *lead product + accessory*; *product + accessory 1 + accessory 2; lead product + lead product*; *accessory + accessory,* and other similar combinations. Relationships between Lead products and accessories are listed in the *Lead Product (LP) vs Accessory* table below.
- **Lead product vs Accessory**
  - Lead product can fulfil its basic purpose on its own without depending on other product, i.e.: *Apple iPhone 16 Pro Max*.
  - Accessory is a product used to enhance the lead product but cannot function on its own (the head strap and the carrying case), i.e.: *iPhone Pro Max 16 headphones*.
- **Product category** - Refers to a group of products that share similar characteristics, functions, or purposes. These are: *Electronics, Media and Games, Fashion, Luggage and Bags, DIY & Tools, Beauty, Medicines, Grocery, Fresh, Pets, Toys, Home, Kitchen, Automobiles, Shoes, Adult, Books*.
  Product category information can be found on the product detail page in the top left corner above the product image



Review Scope

You need to assess Search Queries in **both English and the target language**.

Important!

1. If the search query, offered product title and/or the product description are in English, or a **combination of both English and the target language**, the relevance match needs to be determined in line with the evaluation criteria and the intent of the search query.
   See *examples* for specific scenarios and relevant labels below:

Scenario	Example	Label
SQ in English, OP in English PDP in English	Target language: Italian SQ: *the witch wardrobe* (-> English) OP: https://www.amazon.it/dp/0007323123 (Title of OP in English, PDP in English)	Exact
SQ in Target, OP in EN, PDP in Target	Target language: Italian SQ: *lo hobbit* (-> target) OP: https://www.amazon.it/dp/0007440847 (Title of OP in English, PDP in target)	Substitute
SQ in Target OP in EN PDP in EN	Target language: German SQ: *caroline darian deutsch* (-> target) OP: https://www.amazon.de/dp/1785125982 (Title of OP in English, PDP in English)	Substitute
SQ is a mix, OP in EN, PDP in Target	Target language: French SQ: *atomic habits francais* (-> English and target) OP: https://www.amazon.fr/dp/2035969204 (Title of OP in target, PDP in target)	Exact

2. When **part of the Search Query, Title or PDP is in a foreign language other than the target language or English:**

   - **Judgeable**: If the information required by the Search Query (SQ) is available and understandable in the target language or English (e.g., through the title or description).

   - **Unjudgeable**: If crucial information needed to satisfy the SQ appears only in a foreign language (other than the target and English) and cannot be understood without translation (even if just a few keywords).

   Crucial information = vocabulary/phrases directly tied to the SQ.
   Example: In an EN_FR batch, for SQ *"Nike T-shirt long sleeves"*, the PDP is in English but the word *"Nike"* appears only in Japanese. Since brand is crucial, the query is **unjudgeable** (an EN or FR annotator cannot decipher the brand without translation).

! Do **not** mark a page unjudgeable just because a few non-essential words are in another language. As long as the SQ requirements (purpose/features) can be verified in the target language without translation, the PDP is **judgeable**.

LIONBRIDGE

Task Instructions

Step 1: Review the provided Search Query (SQ) and identify the likely desired product(s). Pay attention to the intent and key characteristics of the SQ. Follow the below steps to ensure you have a sufficient understanding of the desired product represented by the SQ.

✓ *Understanding Search Query*

1. Click on the provided Google link and/or Amazon link to identify all the **likely intents and product interpretations** of the SQ.
   - bear in mind that the **search query can contain errors** (spelling, capitalization, missing hyphens, dashes, etc.) or can be ambiguous (has multiple possible interpretations). Online search of the SQ will aid in identifying the correct spelling and the possible desired product(s).
2. Through search, identify if the search query contains any **brand name/product name/product model or product series** as those will be crucial in determining relevance of the offered product.
3. Identify **all the product type(s) and attribute(s)** of the SQ, such as purpose, brand, model/model number, potential compatibility, target audience (age, gender), colour, size, genre (related to movies, books), occasion or theme, defined style, feature, material, etc.

Step 2: Review the Offered Product (OP) found at the provided Product Detail Page (PDP) link. Pay attention to the intent and key characteristics of the OP. Follow the below steps to ensure sufficient understanding of the OP found at the PDP page.

✓ *Understanding Offered Product*

For accurate evaluation of the relevance of the OP to the desired product of the SQ, follow the steps below:

1. Click on the provided Offered Product Detail Page link and check all the attributes and product types in:
   - The **Title** of the offered product
   - Product **Description** details of the offered product
     → This includes checking the alternative options available within the product description section, such as different sizes, or colours of the product available to select from, which would match the desired product

     Example:

     SQ: pink t-shirt
     OP: red t-shirt
     Observation: the PDP is a red t-shirt but a pink t-shirt is available to select on the PDP, which matches the SQ attributes.

   - Product **Image(s)** of the offered product
   - If the OP title and product description do not match the product type and attributes to the SQ, perform search (ctrl+f) across **Customer comments and Q&A section** of the OP page using the SQ keywords:

     For example, for product attributes (if present in the SQ):
     - Gender are: *boy, girl, man, woman, unisex, universal, etc.*
     - Size are: *small, medium, large, inch, m, cm, ft, etc.*
     - Target group are: *kids, children, family, teens, etc.*
     - Occasion/theme are: *Christmas, Halloween, Thanksgiving, Birthday, etc.*

BREAKING BARRIERS. BUILDING BRIDGES.

2. If the details of the offered product from the page do not provide enough insights to make a valid judgement, search online to identify the key functionality and use of the offered product.

Step 3: Determine the relationship between the **Search Query and the Offered Product**, taking the product type(s) and all the attributes between both into consideration. Compare each product attribute mentioned in the SQ and OP. Then, make a mental note of which features match, and which do not.

Select the most relevant type from the following five ***Relevance Match Types:***

Relevance Match Type	Description	Example
Exact	The offered product fully satisfies the intent of the query and matches all intended product characteristics (i.e. Information on size, colour, brand, model, material, genre, occasion/theme), or target audience (gender, age). You can disregard subjective keywords such as "sexy, beautiful, cute, nice", and you can disregard partial gibberish if at least 1 of the keywords suggests a clear product type.	**Search query:** *meta quest 2* **Offered Product (OP) detail page:** https://www.amazon.com/dp/B099VMT8VZ?th=1 **Explanation:** Offered Product fully meets the search query requirements.
Substitute	The offered product does not fully match the intent/characteristics of the query but serves the same purpose as the intended product type and could be used as an alternative to meet the customer's need.	**Search query:** *Samsung S7* **Offered Product (OP) detail page:** https://www.amazon.com/dp/B07NC3N3Z8 **Explanation:** The specific model of offered product is not the same as that of desired product, but the products offer the same functionality.
Complement	The offered product does not match the product type or fulfil the intended purpose but it is complementary to the desired product because: • it is compatible and can be used together with the DP • it is related to the SQ by brand AND product category, • it is related to the SQ by theme, genre or occasion (product category does not need to be matched) • Partially fulfils the desired product (i.e when SQ is a bundle, and OP only partially fullfills the desired product) **Important**: OP needs to be complementary and directly related to the desired product, not the customer searching for the product.	**Search query:** *Navy blazer for men* **Offered Product (OP) detail page:** https://www.amazon.com/dp/B01MQROZGV **Explanation:** Can be used as an independent product with desired product as part of an outfit.
Irrelevant	The offered product is either entirely unrelated or unsuitable to the desired product due to: • A mismatch on critical attribute such as gender, target audience, theme, genre. • A mismatch on the functionality/purpose of the product type • Compatibility issue with the desired product	**Search query:** *Unicorn backpack* **Offered Product (OP) detail page:** https://www.amazon.com/dp/B074PTYVH2 **Explanation:** Product does not match the theme.
Unjudgeable	The relevance match cannot be assessed because: • The entire query is unintelligible (e.g., gibberish or vague with no clear intent and no product type can be identified from any of the keywords) • The query has a non-product intent (e.g., seeking help, attempting to navigate to a website, etc.).	**Search query:** *How to cancel my prime membership?* **Offered Product (OP) detail page:** https://www.amazon.com/dp/B07SN3KMS6 **Explanation:** Service-related query

	• Query is written in a language other than the target language or English (or OP is in a language other than the target language or English) • OP webpage returns an error: "Page Not Found" • OP doesn't provide sufficient information to determine if it matches the intended product	

In summary: If the SQ and OP are in English or the target language, you have identified a likely product intent from the Search query, and the Offered Product is clear, then determine:

1. If all of the attributes match > then assign **Exact** label.
2. If the intended purpose is preserved and none of the defects, make the product unsuitable> then assign **Substitute** label.
3. If the offered and intended products are different but are compatible and can be used together, or are of the same brand and product category, or same theme/occasion, and if none of the defects make the offered product unsuitable > then assign **Complement** label.
4. Otherwise, assign **Irrelevant** label.

Step 4 (Optional): **Provide a comment** in the comments field, explaining the reason for the selected label.

Step 5: Proceed to the next query and continue the assessment until the entire submission is complete.

Rules of thumb:

Purpose / Functionality		
Rule	**Label**	**Example**
The OP is unrelated to the purpose of DP. Namely, OP neither fulfils the purpose of DP nor can be used as an accessory to DP. **Exception:** OP and DP are of the same brand (see below under "Brand" examples).	**Irrelevant**	**SQ**: office desk **OP**: coffee table **Rationale**: OP is not designed for office work, so it has no relationship with the DP.
Product type		
Rule	**Label**	**Example**
OP and SQ have same product type, but only **material/style difference**	**Substitute**	**SQ**: *cotton shirt* **OP**: shirt (made of less than 50% cotton) **Rationale**: Customers might still consider the product if it is otherwise attractive (e.g., style, design, price)
OP **does not match the product type** of DP but can be used to satisfy the **same utility/purpose** as DP	**Substitute**	**SQ**: treadmill **OP**: Elliptical Machine **Rationale**: both are cardio fitness equipment.
OP is either an independent or an interdependent complementary product to DP	**Complement**	**SQ**: office desk **OP**: office chair **Rationale**: they are used together, so they complement each other
SQ vs. OP don't have the same product type	**Irrelevant**	**SQ**: *Migrain relief pill* **OP**: Valerian capsules **Rationale**: OP is for for stress/anxiety relief, so a different purpose than migrane pain
OP is a bundle with a lot of items, and DP is just one of the items	**Irrelevant**	**SQ:** pastel paper pad **OP:** 54-piece drawing and sketching art set **Rationale**: There are too many items in the OP and only one

		of them is the desired product
Attribute Considerations		
Brand or Trademark		
Rule	**Label**	**Example**
The brand of OP is different as that of DP, but the products have the same functionality	**Substitute**	**SQ**: Nike shoes **OP**: Puma Shoes **Rationale**: the OP is the same product, same use/purpose/functionality, it only differs by brand
SQ and OP has brand affinity; they represent related products (are from the same product category)	**Complement**	**SQ**: Dove shampoo **OP**: Dove deodorant **Rationale**: both are personal care items sharing the brand and from the same product category (beauty)
SQ and OP has brand Affinity, but they represent unrelated products (non-functional relationship)	**Irrelevant**	**SQ**: Samsung laptop **OP**: Samsung tv remote control **Rationale**: the OP is unrelated to the SQ product, even though they are matched by the brand
Model/Model Number		
Rule	**Label**	**Example**
The specific model of OP is not the same as that of DP, but the products offer the same functionality	**Substitute**	**SQ**: Samsung S7 **OP**: Samsung S10 **Rationale**: Different model of a phone, same purpose and functionality
Compatibility [more rules in *Lead Product (LP) vs Accessory* table]		
Rule	**Label**	**Example**
DP is an accessory to a lead product. OP is the same type of accessory, but is not compatible with the that lead product (even if associated by the same brand)	**Irrelevant**	**SQ**: Charging cable pixel phone **OP**: mini-usb charging cable **Rationale**: Pixel phones use USB-C cables
DP is an accessory to a lead product. OP is the same type of accessory, is compatible with the lead product, but the brand if different	**Substitute**	**SQ**: iphone 16 headphones **OP**: headphones huawei freebuds SE 2 **Rationale**: different brand, but same functionality and no compatibility issues
Age		
Rule	**Label**	**Example**
OP is exact or inclusive of the age range with DP	**Exact**	**SQ**: books for a 6-year-old **OP**: book for a first grader **Rationale**: 1st grade typically means 6-7 years old
OP is +/-1 age range from DP and is potentially suitable. If the size is specified by age, e.g., 3-6 months baby, then one range apart, e.g., 0-3 months or 6-9 months baby.	**Substitute**	**SQ**: shoes for an infant starting to walk **OP**: shoes for a toddler **Rationale**: +/- 1 range applies as next group up from infant is toddler
OP's target group is inclusive of the target group in the search query (OP is for families when SQ is for kids)	**Substitute**	**SQ**: kids carry in tag **OP**: generic luggage tag (product description mentions it is for families) **Rationale**: family is inclusive of various age groups, including children
OP is unlikely to be suitable for the age range of DP (more than one age range difference, i.e. adults vs kids)	**Irrelevant**	**SQ**: toys for toddlers **OP**: toys for a 9–14-year-old boy **Rationale**: Age mismatch is a critical defect

Gender		
Rule	**Label**	**Example**
OP is not designed for the explicitly expressed gender in DP	**Irrelevant**	**SQ:** Women's pants **OP:** Men's pants **Rationale**: Gender mismatch renders OP Irrelevant as it is a critical defect
Intended Species		
Rule	**Label**	**Example**
OP is not designed to work for the species in DP	**Irrelevant**	**SQ:** Dry food for dogs **OP:** Food pellets for rabbits **Rationale:** mismatch of intended species renders OP Irrelevant.
Colour		
Rule	**Label**	**Example**
The colours of OP do not match the colour description of DP	**Substitute**	**SQ:** Red bag **OP:** Black bag **Rationale:** Colour mismatch doesn't affect functionality of the product, so it is a stylistic Substitute
Size		
Rule	**Label**	**Example**
OP is not the same size as DP but differs in up to +/-1 size unit. This applies to clothing, shoes, furnishings and other products, which are not designed to fit another product (cushions, pillows, blankets, towels).	**Substitute**	**SQ**: Boots size 6 **OP**: Boots size 7 **Rationale**:
OP is of a different size of DP but is no made to fit something else and represents no compatibility or functionality issue	**Substitute**	1. **SQ**: 25 feet garden hose; **OP**: 50 feet garden hose 2. **SQ**: 20x20 tent; **OP**: 20x48 tent (no compatibility issue) **Rationale**: No compatibility issue, same function, can be offered as an option
OP differs by more than +/-1 size unit from DP	**Irrelevant**	**SQ:** 34" mens levis jeans **OP:** 32" mens jeans **Rationale**: the OP is smaller by more than 1 size
OP differs in up to +/-1 size unit from DP, or is of a different size than DP, and DP is designed to fit another product (e.g., cushion cover, pillow cover, fitted sheet, duvet cover, bed sheet, mattress or mattress cover, curtain, photo frame, etc)	**Irrelevant**	1. **SQ:** king size bedsheet set; **OP:** queen size bedsheet set 2. **SQ:** 17x40 photo frame vs 17X41 photo frame (compatibility issue) **Rationale**: the DP is designed to fit another product
Genre [in media]		
Rule	**Label**	**Example**
OP does not refer to the same product but is in the same or overlapping genre with the product for DP. This rule can refer not just to media item, but to items which use the likeness of media characters.	**Substitute**	**SQ**: *batman tshirt* **OP**: Superman tshirt **Rationale**: overlapping genres: superhero

Genre affinity: OP is a media product of the same genre as SQ, but is of a different media type	**Complement**	**SQ**: jazz music **OP**: Jazz Dance Level 1 video **Rationale**: Different product types, but matched by genre
OP is of a different genre than SQ. This rule can refer not just to media items, but to items which use the likeness of media characters.	**Irrelevant**	**SQ**: batman tshirt (Genres: action, superhero) **OP:** frozen tshirt/ Any Plain tshirt (Genres: children's film, animated cartoon) **Rationale**: the genre is mismatched so despite the product type match, the OP is Irrelevant
Media/non-Media characters (singer, actor, writer, cartoon character, book character)		
Rule	**Label**	**Example**
SQ is an author, actor, singer and OP represents media products they have produced or featured in, (songs, movies, books) or which are about them.	**Exact**	**SQ**: Harry Potter **OP**: Harry Potter and the Prisoner of Azkaban book **Rationale**: the OP is a book/movie about the character which makes the product Exact
SQ is an author, actor, singer and OP is a merchandise related to the personality or character (such as a costume, posters, toys, clothing, etc.)	**Substitute**	1. **SQ**: Harry Potter; **OP**: Harry Potter mug **Rationale**: merchandise of the character makes it a Substitute
OP represents other characters from the same book/movie	**Substitute**	2. **SQ**: Harry Potter figurine; **OP**: Hermione figurine **Rationale**: same product type merchandise but of a different character from the same book makes it a substitute
OP represent books of analysis/commentary about the fictional character	**Complement**	**SQ**: Harry Potter **OP**: Awesome Facts for Potter Fans – The Unofficial Collection: The Encyclopedia of Secret Knowledge about the Most Famous Wizard **Rationale**: Analysis book about the Harry Potter series makes the OP complementary.
Occasion/Theme		
Rule	**Label**	**Example**
OP does not match the theme of SQ, but it is generic and not themed, so it doesn't create a theme clash **Important**: To identify a theme, note that t**heme** can be associated with: 1. media characters or franchises (e.g., Avengers), 2. sports (e.g., cricket) 3. visuals (e.g., images of cats) 4. occasion/event (e.g., wedding, Christmas)	**Substitute**	**SQ**: Green St Patrick's day balloons **OP**: green balloons **Rationale**: OP is a non-themed, generic product that doesn't clash with the desired theme
Occasion/Theme affinity only: OP is not a functional substitute for DP but matches its theme. Product category is not necessary.	**Complement**	**SQ**: 4th of July mugs **OP**: July 4th American Flag Banners Garlands **Rationale**: the matching occasion makes the OP complementary even though the product type is different
OP does not match the theme or occasion of SQ.	**Irrelevant**	1. **SQ**: Halloween wreath; **OP**: Christmas wreath; 2. **SQ**: Cricket jersey; **OP**: Football jersey

		Rationale: theme is not matched, so even if the product type is matched, the OP is still Irrelevant
Other attributes: Style, feature, material		
Rule	**Label**	**Example**
OP has a different style, feature, material, etc. than that of DP, but satisfies the basic functionality of the product type of the SQ OP matches only some of multiple attributes of the SQ, but still serves a purpose/functionality of the SQ	**Substitute**	1. SQ: waterproof shoes vs. OP: shoes (not waterproof); 2. SQ: cotton shirt vs. OP: shirt (made of less than 50% cotton) 3. SQ: hanging planters vs OP: regular planters (functionality as a planter still met) 4. SQ: khaki women's shorts vs. OP: khaki women's pants

Lead Product (LP) vs Accessory *(relevant when OP and SQ are not mismatched by any of the rules of thumb)*			
Search Query	**Offered Product**	**Label**	**Example**
LP	**LP + Accessory**	**Exact**	**SQ**: *Electric Guitar* **OP**: Electric Guitar, amplifier/ stand/cover **Rationale**: OP is a bundle, and DP is its lead product
LP + Accessory	**LP**	**Substitute**	1. SQ: electric radiator with remote vs. OP: heater; 2. SQ: scanner with scanner cover vs. OP: scanner **Rationale**: DP is a bundle, and OP product is the lead product in it
LP	**LP + LP**	**Substitute**	1. SQ: cape vs. OP: superhero cape + mask; 2. SQ: Shampoo vs. OP: Shampoo + Conditioner **Rationale**: OP is a bundle, and DP is part of this bundle with another either inter- or independent complementary product
Accessory	**Accessory + Accessory**	**Substitute**	**SQ**: iphone 16 pro case kickstand **OP**: Case kickstand + screen protector **Rationale**: the OP offers 2 different products, and the DP is only one of them
LP + LP	**LP**	**Complement**	**SQ**: pilot costume **OP**: pilot hat **Rationale**: OP partially fulfils the product requirement; only 1 of the desired products is offered by the OP
Accessory + Accessory	**Accessory**	**Complement**	**SQ**: Iphone case and screen protector **OP**: iphone case **Rationale**: OP is one of the 2 desired accessories
LP	**Accessory**	**Complement**	**SQ**: *13-inch MacBook Air laptop* **OP**: Carrying case compatible with a 13-inch MacBook Air laptop **Rationale**: OP is a compatible Accessory to the lead product
LP + Accessory	**Accessory**	**Complement**	**SQ**: scanner with scanner cover **OP**: scanner cover **Rationale**: DP is a bundle, and OP is in it, but not a lead product.
Accessory	**LP + Accessory**	**Irrelevant**	**SQ**: *ipad cover*

			OP: ipad with a cover **Rationale**: OP is a bundle, and DP is an accessory in this bundle
Accessory	**LP**	**Irrelevant**	**SQ**: *iphone 13 case* **OP**: iphone 13 smartphone **Rationale:** the desired product is an Accessory, and the OP is a related lead product
Accessory 1	**Accessory 2**	**Irrelevant**	**SQ**: *iphone 13 case* **OP**: iphone Charger **Rationale:** both the DP and OP are different accessories, do even if they are related to the same lead product, they are Irrelevant as they have no direct relationship to each other.

Priority of Considerations when identifying mismatches across multiple areas:

1. Purpose/Functionality, Compatibility, Critical Attribute (gender, target audience/intended species/age, size) (fitting))
2. Theme/ Genre affinity
3. Lead Product to Accessory
4. Brand Affinity, Other Attributes (Style, Features, Material)

Additional Considerations:

- ### Ambiguous queries

A query is considered ambiguous if it has multiple possible interpretations. For example, if one of the interpretations would result in an **Exact** judgment for the query, then that should be the judgment, even if other interpretations would result in **Complement** or **Irrelevant** judgments.

Example: a query *cat pajamas* would be an **Exact** match for *pajamas with cat images on them*, *pajama costume of a cat*, or *pajamas for cats*.

- ### Broad queries

Queries exploratory in nature, providing only a basic information about the product, for example: just a category, a product type, or a brand. These queries could potentially have thousands of relevant ***Exact*** matches.

Examples: any jewellery item would be considered an exact match for query with query *jewellery*. Any product made by *Reebok* would be considered an ***Exact*** match for a query *reebok*.

- ### Items not sold on Amazon

a. If the query is for products not sold on the platform (examples: *cat, dog*, *gun, car* etc.), and the **OP link refer to product related to the query,** which can be used for/buy, please mark as ***Exact***.

***Examples*:** SQ: cat - OP: Cat food - Judgement: Exact; **Explanation**: The object referenced in the query is not sold on Amazon, any product related to the query to be marked as *Exact*.

a. Merchandise which only depicts items that are not sold (*printed posters, pet printed t-shirt/mugs, poster of cars, toy or airsoft gun, Image of gun* etc.) would be considered as ***Irrelevant***.

***Examples*:** SQ: Car - OP: A poster with a car; **Rationale**: Poster cannot be of any use to the queries product (car). Hence should be marked as *Irrelevant*. However, if the ASIN shown is “car repair book” then judgement would be *Exact*.

- ### Quantity

When the only difference between DP and OP is desired quantity, determine the Relevance Match based on the **presence of specific units:**

a. **No units in SQ → OP is *Exact***
Example: **SQ:** 2 mugs - **OP:** 1 mug; **Rationale***:* Quantity differences without units do not affect functionality. The customer can adjust the quantity, so OP is *Exact*.

b. **Units included in SQ → OP is *Substitute***
Example: **SQ:** 1L bowl - **OP:** 2L bowl; *Rationale:* Unit differences affect the preferred size/volume, making OP a *Substitute*

Good practices:

- Do not rely on your intuition and best judgment, it is imperative you compare all attributes of the desired product and the offered product.
- To research and identify if the OP's attributes correspond to those of the SQ, make sure to refer to the product title, image, description on the PDP (product detail page). An attribute might not be present in the title but could be present in the PDP. In the rare cases of inconsistency among the product images, title, and description, use the information in the product reviews and Q&As.
- Google Images search may help you to visualize the likely desired product(s).
- Compare product categories for both DP and OP, example:
  Home & Kitchen › Heating, Cooling & Air Quality › Space Heaters › Electric Space Heaters
